

Permanent Make-up Healing Schedules

Lips:

Day 1: Swelling, tender, heavy thick lipstick appearance.
Day 2: Slight swelling, reddish and tender.
Day 3: Less swelling, thicker texture.
Day 4: Exfoliation (peeling skin) begins. Very chapped lips.
Day 5: Very chapped, but almost finished with first “chappy” stage.
Day 6: A soft, rich color begins to appear.
Days 7-13: Lip color disappears and the “frosty” (second “chappy” stage) occurs.
Day 14: Color “blooms” from within more and more each day until day 21 (three weeks post procedure)
Day 21: Healing complete. The color you see is the enhanced color you now have. Your lips will remain a bit dry for a month or two. Use a good lip balm as your lips return to normal texture.

Eyeliner:

Day 1: Eyelids swollen, with a heavier than usual eye make-up look.
Day 2: Eyelids swollen, usually for only a few hours after waking up, With the heavier eye make-up look continuing.
Day 3: Swelling decreases with a tight feeling on lids. The pigment begins to lift away from the skin.
Day 4: Some itching is normal as the skin begins to flake. DO NOT PICK AT IT!
Day 5: Blinking movements of the eye usually remove all the pigment by this day. Makeup color is Some-what grayish and will take a few more days to clarify to full color.

Eyebrows:

After the procedure, don't be concerned that your eyebrows initially appear darker and heavier in size than you desire. This is all part of the process.

Day 1: The eyebrows appear approximately 20 to 25% darker, and bolder in width than they will be when healed. Your skin is red under the pigment, which causes the color of the pigment to appear darker. There is some swelling, although this is difficult to see due to the texture of the skin in the eyebrow area. This swelling will subside.
Day 2: Conditions remain the same.

Day 3: Eyebrows start to itch as exfoliation begins. The brows appear a bit thicker in texture.
Day 4: The skin begins to flake, peeling from the outside edges first. Exfoliation (peeling of skin) will cause the excess pigment surrounding the eyebrow procedure to flake away and the eyebrows begin to appear narrower.
Day 5: Color finishes flaking off. New skin continues healing over the pigmented area and results in a softer and grayer appearance to your eyebrows.
Days 6-10: Color clarifies during this period and eyebrows gradually appear more and more normal.

Note:

Permanent make-up procedures are affected by the canvas (your skin) that they are performed on. If your skin is sun damaged (even from tanning beds), thick and uneven in texture, or excessively dry or oily the result cannot be expected to be perfect after the initial procedure. Scars on the lips from fever blisters cause pigment removal. Lifestyle medications, smoking, metabolism, facial surgery, and age of skin all contribute to fading. Touch-ups are needed and should be done no sooner than 30 days after your initial procedure to ensure the best result and to keep you permanent cosmetics looking the best. Procedure maintenance, as outlined in your pre/post procedure directions, is very important.
